Software Engineer with experience in .NET backend development, feature implementation, application maintenance, defect resolution, and production issue troubleshooting. Hands-on experience with C#, .NET Core, SQL, REST APIs, and enterprise application development, with a strong foundation in object-oriented programming, debugging, API development, and SDLC practices. Experienced in story ownership, code reviews, regression testing, and collaborating with cross-functional teams to deliver reliable and maintainable software solutions.

SKILLS

Programming Languages:	C#, Python, SQL
Frameworks & Technologies:	.NET Core, Flask, Express.js, Angular, REST APIs
Software Development:	OOP, API Development, Debugging, Error Handling, Code Refactoring
Databases:	SQL Server, MySQL
Testing & Quality:	Regression Testing, Unit Testing, Code Review, Defect Management
Cloud & Tools:	AWS (EC2, S3), Docker, Git, JFrog
Methodologies:	Agile, SDLC, Cross-functional Collaboration

EXPERIENCE

LTM : Software Engineer Bangalore, India	DEC 2024 - Present
- Working on an enterprise-scale healthcare device software project for a global medical technology client, contributing to backend application development and maintenance. - Developing and enhancing application features based on assigned stories, including requirement understanding, implementation, debugging, and story completion. - Working with C# and .NET Core to develop and maintain backend application components, service-layer logic, and business functionality. - Performing defect analysis, root-cause investigation, bug fixing, and production issue resolution to improve application stability and reliability. - Collaborating with QA and development teams to reproduce issues, validate fixes, perform regression testing, and ensure changes are release-ready. - Taking ownership of assigned stories and defects, participating in code reviews, supporting team members, and following object-oriented principles, coding standards, version-control practices, and Agile development processes.	

PROJECTS

Beyond The Boundary Machine learning: Python, Flask, HTML, CSS, AWS	Nov 2023 - April 2024
- Built a machine-learning-based system for cricket player selection using historical performance data. - Performed data preprocessing, feature engineering, and model training using Random Forest and KNN. - Developed a Flask-based web interface for real-time player substitution recommendations. - Deployed the application on AWS EC2.	
TripVault Python, Flask, PostgreSQL, Cloud Storage	Jan 2026 - Present
- Developing a collaborative cloud storage platform that enables groups to pool and manage distributed storage for shared files. - Implementing a hybrid storage allocation mechanism using best-fit placement, with support for distributing files across multiple storage providers when required. - Building backend services and database models to manage file metadata, storage allocation, user storage capacity, and physical file locations.	

RESEARCH AND PUBLICATIONS

Title	An Optimized Approach of Player Selection in Cricket Using Performance Analytics
Authors	Pranav Kumar, Samyukta D. Kunta
Published In	International Conference on Emerging Research in Computing, Information, Communication and Applications (ERCICA) 2024; Advances in Communication and Applications, Lecture Notes in Electrical Engineering, Springer, Singapore
Publication Year	2025 (Online First: July 30, 2025)
Status / Indexing	Published by Springer; Scopus-indexed
DOI	10.1007/978-981-96-4679-1_4

EDUCATION

PES University, M.C.A Bangalore, India	GPA: 7.79 / 10.0	AUG 2024
IIMT College of Management, B.C.A Greater Noida, India	GPA: 7.00 / 10.0	SEP 2022
