Software Engineer experienced in C# and .NET Core backend development, REST APIs, SQL, and enterprise application support. Skilled in feature implementation, production troubleshooting, defect resolution, code reviews, and regression testing, with a focus on delivering reliable, maintainable software solutions.

SKILLS

Programming:	Python, C#, SQL
Backend:	.NET Core, ASP.NET Core Web API, Entity Framework Core, Dependency Injection, Flask
API & Integration:	RESTful APIs, Swagger/OpenAPI, service-layer design, error handling, integration patterns
Databases:	SQL Server, MySQL, PostgreSQL
Testing & Quality:	Unit Testing, Regression Testing, Code Review, Defect Management, Root-Cause Analysis
Cloud & Tools:	AWS, Docker, Git, JFrog, GitHub Actions, Copilot, CI/CD basics
Pratices:	OOP, SOLID, Agile/Scrum, SDLC, code refactoring, technical documentation

EXPERIENCE

LTM : Software Engineer| Bangalore, India Dec 2024 - Oct 2026

- Contributing to the development and maintenance of enterprise-scale healthcare software for a global medical technology client, focusing on application reliability and system quality.
- Analyzing requirements, breaking down assigned stories into actionable tasks, and implementing feature enhancements aligned with business and technical requirements.
- Investigating complex application issues, performing root-cause analysis, and implementing fixes to improve system stability, reliability, and maintainability.
- Taking ownership of assigned stories and defects throughout the development lifecycle, from requirement analysis and implementation to validation and resolution.
- Collaborating with cross-functional teams to troubleshoot issues, validate solutions, perform regression testing, and support successful software releases.
- Contributing to code reviews, refactoring, technical problem-solving, and continuous improvement while following engineering best practices and Agile development processes.

RESEARCH AND PUBLICATIONS

Title	An Optimized Approach of Player Selection in Cricket Using Performance Analytics
Authors	Pranav Kumar, Samyukta D. Kumta
Published In	International Conference on Emerging Research in Computing, Information, Communication and Applications (ERCICA) 2024; Advances in Communication and Applications, Lecture Notes in Electrical Engineering, Springer, Singapore
Publication Year	2025 (Online First: July 30, 2025)
Status / Indexing	Published by Springer; Scopus-indexed
DOI	10.1007/978-981-96-4679-1_4

PROJECTS

TripVault | Python, FastAPI, PostgreSQL, Docker, Cloud Storage Jan 2026 - Present

- Developing a cloud storage management platform that enables groups to pool, allocate, and manage shared files across multiple storage providers.
- Implementing a hybrid storage allocation algorithm using best-fit placement, with file chunking as a fallback when no single provider has sufficient capacity.
- Building RESTful APIs with FastAPI and PostgreSQL to manage file metadata, storage capacity, allocation decisions, and physical file locations.
- Exploring AI-assisted storage recommendations to improve provider selection based on available capacity, file size, and allocation constraints.

Beyond The Boundary | Python, Flask, Scikit-learn, HTML, CSS, AWS Nov 2023 - April 2024

- Developed a machine-learning-based cricket player selection system using historical performance data and Python.
- Implemented data preprocessing and feature engineering, and trained Random Forest and K-Nearest Neighbors (KNN) models for player selection.
- Built a Flask-based web interface for player substitution recommendations and deployed the application on AWS EC2.

EDUCATION

PES University, *M.C.A* | Bangalore, India GPA: 7.79 / 10.0 AUG 2024

IIMT College of Management, *B.C.A* | Greater Noida, India GPA: 7.00 / 10.0 SEP 2022
